

Course description

Course No.	1900808W	College	Science	Dept.	Mathematics
Teacher	王彤 (Tong Wang)				
Time	2017.06.12-2017.07.14				
Course Name	English	Multivariable Calculus			
	Chinese	多变量微积分			
Course credit hours	Total	Theory	Self-study or Practice	Credits	
	48	40	8	4.0/3.0	
Course description:					
Introduction of vectors and the geometry of space, vector-valued functions, partial derivatives, multiple integration, vector calculus etc.					
Requirements for courses; ability and knowledge in advance					
The prerequisites are Calculus I and Calculus II.					
Course structure explanation:					
Make clear the necessary parts, optional parts, distribution of hours. Courses with experiments or practice are expected to explain credit hours needed, content, scheme and functions.					
Week	Content				
1	1. Introduction and Three-Dimensional Coordinate Systems 2. Vectors and The Dot Product 3. The Cross Product and Equations of Lines and Planes 4. Cylinders and Quadric Surfaces and Vector Functions and Space Curves 5. Project				
2	1. Derivatives and Integrals of Vector Functions and Arc Length and Curvature 2. Motion in Space: Velocity, Acceleration and Functions of Several Variables; 3. Limits and Continuity, and Partial Derivatives 4. Tangent Planes and Linear Approximations.				

3	<ol style="list-style-type: none"> 1. The Chain Rule and Directional Derivatives and the Gradient 2. Directional Derivatives and the Gradient Vector, and Maximum and Minimum Values 3. Lagrange Multipliers and Double Integrals over Rectangles and General Regions 4. Double Integrals in Polar Coordinates <p style="text-align: center;">Mid-term Exam</p>
4	<ol style="list-style-type: none"> 1. Applications of Double Integrals and Double Integrals in Polar Coordinates 2. Applications of Double Integrals and Triple Integrals in Cylindrical and Spherical Coordinates 3. Change of Variables in Multiple Integrals and Vector Fields 4. Line Integrals
5	<ol style="list-style-type: none"> 1. Green' s Theorem and Curl, and Divergence 2. Parametric Surfaces and Their Areas, and Surface Integrals 3. Parametric Surfaces and Their Areas, and Surface Integrals 4. Stokes' Theorem and The Divergence Theorem. <p style="text-align: center;">Final Exam</p>

Teaching methods (Lectures, practice, etc.)

Lectures and self-study

Forms of evaluation and requirements

Structure of the final grade(including presence, class performance,), focus of exam, forms of exam(test, interview, final report, etc)

Homework and final exam
